Seminar Class Week 1
The Context of Innovation

Engineering projects are technical, but to be successful they need more than technical developments. Many groups depend upon (trust) each other. This produces ethical problems.

Today you will watch a documentary about an engineering project. As you watch, you should pay attention to the many different requirements and participants of a significantly innovative project, in other words, to its *context*.

IN CLASS

Overleaf are some questions, After the video, *you will be expected to discuss them*.

This week's out of class (i.e. tutorial) question

There are other videos in this series, available from the Library. We encourage you to continue learning from them.

THE FINE PRINT

This tutorial activity is designed so that students examine the wider context of an engineering project and the way a project is undertaken (Was it ethical conduct?).

Remember that *you will be marked on your contribution to class discussion*.
