

Class-wide weightings of categories

First, thank you all for participating. 215 of you completed the survey.

Overall, the average weightings (being fraction of importance when considered in resolving a question) were

environmental	0.33
social	0.25
cultural	0.17
economic	0.25

which were exactly the same as s2/2018!

In other words, overall, as a class, you think that environmental sustainability is most important (no surprise there!), followed by social and economic equal, and finally cultural considerations.

Furthermore, 129 of you had a combination of answers that was unique to you. See! You *do* show differences in your thinking! There were 39 other distinct combinations of answers shared by the remaining 86 students, including (most common) 0.25, 0.25, 0.25, 0.25 and 0.39, 0.21, 0.08, 0.42, each shared by 4 of you.

Finally, 46 % of you thought Environmental considerations most important, 25 % thought Economic, 9 % thought Social, and 4 % Cultural (which surprised me). Another 16 % of you did not have a distinct highest preference.

And one student held exactly the overall average class preference!
